

# SALTY / ALKALI PASTURE MIX

An excellent mix for salty and/or alkaline soils. Does well with drought and is highly palatable. Grows 12-53 inches in ideal conditions. For new seeding, broadcast at 50Lbs./acre or drilled at 25Lbs./acre. For over-seeding, broadcast at 30Lbs./acre or drilled at 15Lbs./acre.

## MIX CONTAINS:

### **10% AC Saltlander Wheatgrass**

Has aggressively spreading Rhizomes with germination in 7-14 days and can get 21"-53" tall. A long-lived perennial, cool season, very drought tolerant grass. AC Saltlander is highly palatable.

### **10% Garrison Creeping Foxtail (coated)**

Sod-Forming grass with germination in 12-14 days. A long-lived perennial, cool season, grows 12"-24" is extremely winter hardy and recovers quickly from grazing due to its numerous aggressive underground rhizomes.

### **20% Hercules Tall Wheatgrass**

Bunchgrass, with germination in 21 – 28 days. Perennial, cool season grows 3' -7'. Hercules is persists in high saline conditions and is highly palatable and has high forage potential.

### **20% Forage Perennial Ryegrass**

A perennial, cool season grass that germinates 5 – 8 days, an introduced bunchgrass growing to heights of 18" to 36". Perennial Ryegrass is one of the most widely used grasses and is adaptable to a wide variety of soils and climatic conditions.

### **20% Forage Tall Fescue**

A long-lived perennial, cool season, germinates 7 – 10 days, introduced deep-rooted, bunch grass growing up to 5'. Tall fescue is endophyte free.

### **20% Smooth Brome**

Sod forming grass with germination in 10-14 days. Smooth brome is resistant to drought and extremes in temperature. Smooth brome is the most widely used of the cultivated brome grasses.
