

Triathlawn Blend

This type of grass is called "turf-type tall fescues." It is a mixture of high-endophyte and rhizome, making it deep-rooted and tough enough to survive winter. Compared to other grasses like Kentucky Bluegrass or perennial ryegrass, tall fescues can access water from deeper soil depths if the soil is adequately prepared. It is highly resistant to diseases and pests and can grow on different soil types in full sun or light shade. It is also very stress-tolerant and requires little maintenance. This tall fescue is of high quality and has excellent rhizome capability, forming a durable turf that can easily handle constant use, heat, and drought.

MIX CONTAINS:

100% Turf Type Tall Fescue

Seeding Rate:

Seed @ 8-10 lbs per 1,000 sq ft
Overseed @ 4-5 lbs per 1,000 sq ft

Establishment Rate:

Germinates in 10-14 days with proper moisture
Forms a dense turf in 8-10 weeks

Characteristics:

Endophyte-enhanced
Dark Green color
Medium coarse texture

Light/Soil Requirements:

Grows equally well in sun and shade
Performs well on many soil types
