

Native Wonder Mix

A mix of Bowie Turf-Type Buffalograss and Blue Grama, ideal for a true native lawn with a natural look. Very heat and drought-tolerant.

MIX CONTAINS:

70% Turf Type Buffalograss

A warm season sod-former with germination in 14-21 days. Buffalograss is a low-maintenance lawn grass that stays green all summer and goes dormant in winter. It has low water usage, winter hardiness, and low vertical growth. Bowie buffalograss is a great option with a medium green color, fine leaf texture, good turf density, and low growth habit. Its improved lateral growth makes for quicker establishment.

30% Native Blue Grama

Warm season bunchgrass with germination in 7-10 days.

This grass demonstrates good drought, fair salinity, and moderate alkalinity tolerances. A great companion for buffalograss in native turf areas.

Characteristics:

Grows 10-20 inches tall if unmown
Requires little to no maintenance
Persists in elevations up to 6,800 ft

Seeding Rate:

New Seeding

3-4 lbs per 1,000 sq ft or up to
10 lbs 1000 sq ft.

Overseeding

1-2 lbs per 1,000 sq ft
