

ROCKY MOUNTAIN NATIVE MIX

This mixture was developed for the Rocky Mountain region. It consists of native grasses that include both cool and warm season species. Provides great cold and drought tolerance for the extremes of the region. Grows 25-36 inches tall with average rainfall and is great for holding mountain soils. For new seeding and non-irrigated use 20-25Lbs./acre, new and irrigated use 40Lbs./acre. For over-seeding and non-irrigated use 10-15Lbs./acre, over-seeding and irrigated use 20Lbs./acre.

MIX CONTAINS:

20% Slender Wheatgrass

Cool season bunchgrass with germination in 21-28 days.

A species well adapted to the mountain and intermountain areas of the western United States and the northern Great Plains. It establishes quickly, and thus is frequently used for reclamation.

20% Mountain Brome

A cool-season bunchgrass with germination in 10-14 days. Survives on thin, dry or coarse soils, and displays strong winter hardiness. Mountain brome will produce best in moist deep fertile soils.

15% Green Needlegrass

A cool season bunchgrass with germination in 5-8 days. A grass native to the area from Northern Great Plains to Arizona. It naturally occurs on bottom lands and river basins throughout the foothill and mountain altitudes.

15% Thickspike Wheatgrass

A cool season sod-forming grass with germination 21-28 days. Very drought tolerant and has extensive rhizomatous root system.

10% Rocky Mountain Fescue

Native, cool-season grass, most often found in open, dry, sandy areas such as prairies, roadsides and forest openings, but also in cracks, crevices and ledges of bluffs and rock outcrops.

5% Blue Grama (Coated)

Warm season bunchgrass with germination in 7-10 days. This grass demonstrates good drought, fair salinity, and moderate alkalinity tolerances.

5% Indiangrass

Warm season bunchgrass with germination in 21-28 days. It can grow 3-5 feet tall. Grows best in deep, well drained soils.

5% Sandberg Bluegrass

Cool season with germination 7 - 21 days. Does well in a variety of soils.

5% Prairie Sandreed

Warm season sod forming with germination in 21-28 days. Grows 24-72 inches tall. Prefers sandy sites, drought tolerant and winter hardy.
